REPORTS IN ZOHO CREATOR

1. Aim

To create, configure, and understand reports in Zoho Creator for displaying stored application data in an organized format, with suitable views, sorting, filtering, grouping, and basic analysis.

2. Introduction

2.1 Reports

A report in Zoho Creator is used to display records submitted through forms in a structured and readable manner. Reports help users view stored data, search for records, apply filters, sort information, and analyze the data according to the application's requirements.

2.2 Importance of Reports

Reports convert raw form data into useful information for users and administrators. Different report layouts can be used depending on the type of data and the purpose of the application. A report may be used to monitor records, identify status values, review employee information, or study transaction details.

3. Objectives

- To understand the purpose of reports in Zoho Creator.
- To create a report from an existing form.
- To configure columns, sorting, filtering, and grouping options.
- To display application records in a clear and useful format.
- To understand how reports support data analysis and decision making.

4. Types of Reports

Report Type	Description	Example Use
List Report	Displays records in rows and columns.	Employee records
Summary Report	Presents grouped or summarized information.	Leave requests by department
Matrix / Cross Tab	Displays data using row and column groupings.	Leave type by department
Chart Report	Represents data graphically.	Approved vs. pending requests

5. Procedure

Step 1 – Open the Application — Log in to Zoho Creator and open the Employee Management / Employee Leave Management application.

Step 2 – Open Reports — Navigate to the report section and choose the form whose records need to be displayed.

Step 3 – Create a Report — Select the option to create or configure a report and choose the required report format.

Step 4 – Select Fields — Choose the fields that should appear in the report, such as Employee ID, Employee Name, Department, Leave Type, Start Date, End Date, and Status.

Step 5 – Configure Sorting and Filtering — Apply sorting, search, filters, or criteria to display only relevant records.

Step 6 – Group Records — Group information based on a useful field such as Department, Leave Type, or Status.

Step 7 – Add Charts or Summaries — Where required, add charts or summary information to visualize the data.

Step 8 – Save and Test — Save the report and test it using sample records. Verify that the records, filters, and calculations are displayed correctly.

6. Example Report – Employee Leave Requests

An Employee Leave Requests report can be created from the leave request form. The report can display the submitted requests and help the administrator monitor their status.

Request ID	Employee	Leave Type	Start Date	End Date	Reason	Status
LR-1001	Alice Johnson	Casual Leave	21-Sep-2026	22-Sep-2026	Personal work	Pending
LR-1002	Bob Williams	Sick Leave	18-Sep-2026	19-Sep-2026	Fever	Approved
LR-1003	Carol Martinez	Earned Leave	25-Sep-2026	26-Sep-2026	Family function	Pending
LR-1004	David Lee	Casual Leave	12-Sep-2026	13-Sep-2026	Personal work	Approved
LR-1005	Eva Brown	Sick Leave	10-Sep-2026	12-Sep-2026	Health issue	Rejected

7. Report Configuration

- Columns: Employee Name, Department, Leave Type, Start Date, End Date, and Status.
- Sorting: Sort requests by Start Date or Employee Name.
- Filtering: Display only Pending, Approved, or Rejected requests.
- Grouping: Group records by Department or Leave Type.
- Search: Use report search to quickly locate a specific employee or request.
- Charts: Represent request counts by status or leave type.

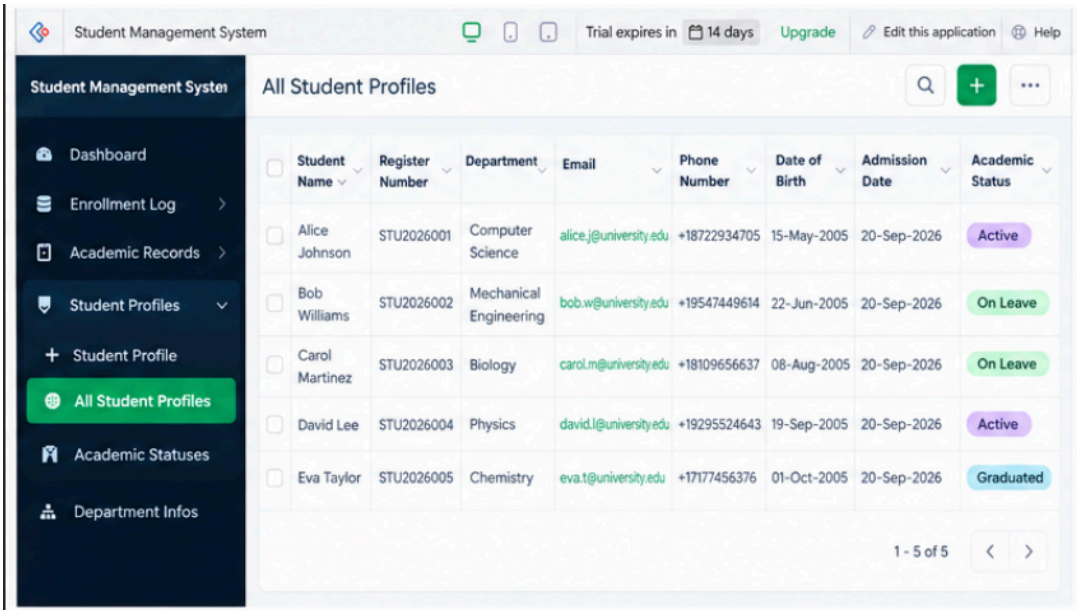

8. Sample Report Flow

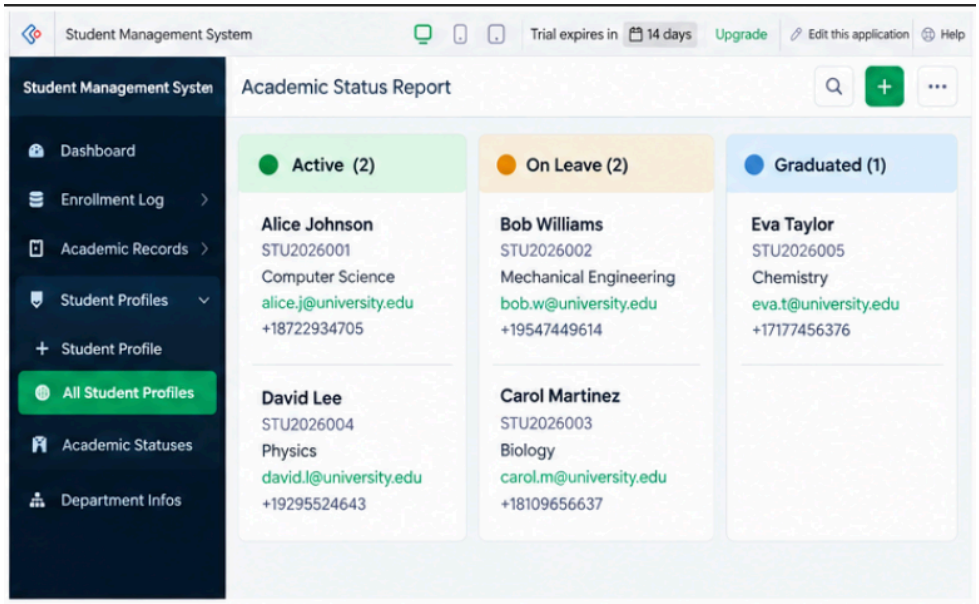

Form Data	Create Report	Select Fields	Filter / Sort	Group / Chart	Final Report
Records stored	Choose layout	Choose columns	Apply conditions	Summarize data	View / Analyze

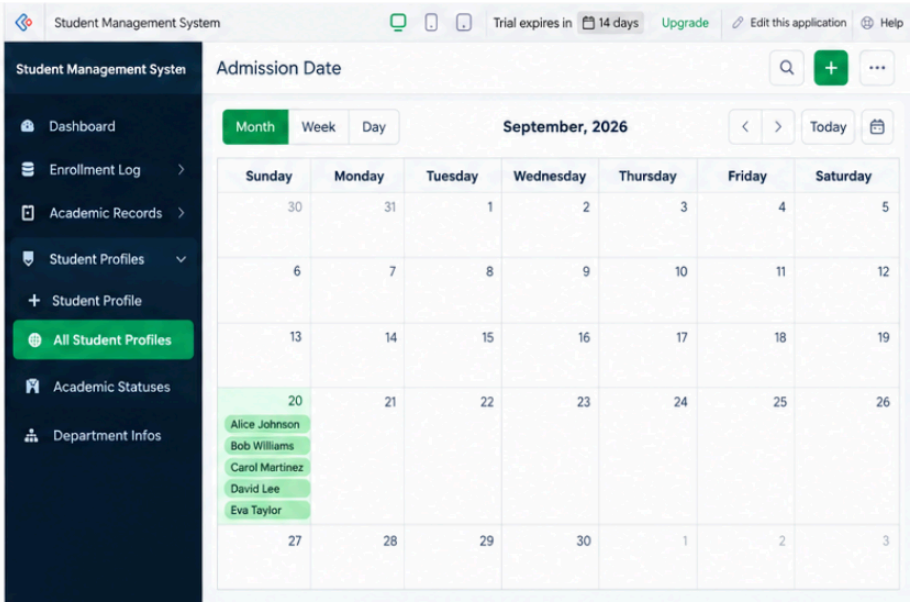

9. Advantages of Reports

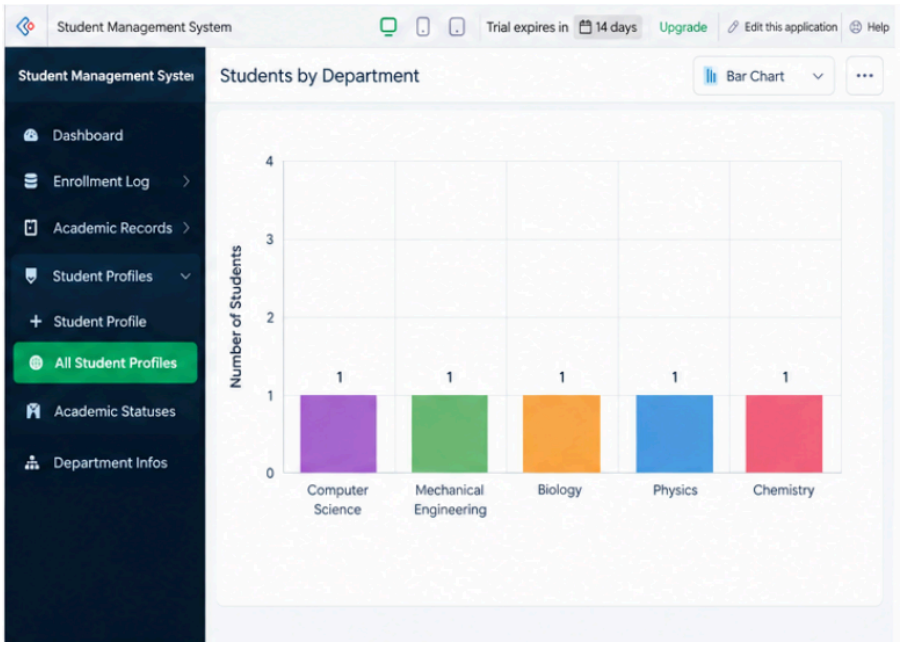

- Provides an organized view of form records.
- Makes searching and filtering application data easier.
- Supports sorting and grouping of records.
- Can present information using charts and summaries.
- Helps administrators monitor application data more effectively.

11. Result

The report activity was successfully carried out in Zoho Creator. Application records were displayed in a structured report format with suitable fields, filtering, sorting, grouping, and summary options. The report can be used to monitor employee and leave information efficiently.

12. Conclusion

Reports are an important part of Zoho Creator applications because they transform stored form records into meaningful information. By creating suitable report views and applying filters, sorting, grouping, and charts, users can easily monitor and analyze application data.
