DASHBOARD IN ZOHO CREATOR

1. Aim

To create and configure a dashboard in Zoho Creator that presents important application information using summary cards, charts, reports, and quick-access components in a single visual interface.

2. Introduction

2.1 Dashboard

A dashboard is a visual interface that brings together important application information in one place. In Zoho Creator, dashboards can be designed using components such as charts, reports, panels, pages, and summary information so that users can monitor data quickly.

2.2 Purpose of a Dashboard

A dashboard helps users understand the current state of an application without opening multiple reports separately. It can display key totals, status information, trends, category-wise data, and links to frequently used actions.

3. Objectives

- To understand the purpose and structure of a dashboard in Zoho Creator.
- To create a dashboard using existing application data.
- To display key metrics through summary cards and visual components.
- To integrate reports and charts into a single dashboard page.
- To provide quick access to frequently used application actions.

4. Dashboard Components

Component	Purpose	Example
Summary Card	Displays an important total or KPI.	Total Students
Chart	Shows numerical data visually.	Students by Department
Report	Displays detailed records.	Recent Student Records
Quick Link	Provides direct access to an action or form.	Add Student
Panel / Section	Groups related dashboard elements.	Academic Summary

5. Procedure

Step 1 – Open the Application — Log in to Zoho Creator and open the Student Management System application.

Step 2 – Create or Open Dashboard — Navigate to the dashboard or page area and create a new dashboard or edit an existing one.

Step 3 – Add Summary Components — Add summary cards for important values such as total students, active students, students on leave, and graduated students.

Step 4 – Add Charts — Insert charts to visualize information such as students by department or students by academic status.

Step 5 – Add Reports — Add a report or recent-record component to display detailed student information.

Step 6 – Add Quick Links — Create links or buttons for frequently used actions such as Add Student, View Academic Records, or View Enrollment Log.

Step 7 – Arrange the Dashboard — Organize the components into sections so that key information is visible clearly and consistently.

Step 8 – Test and Save — Check the displayed values, chart data, navigation links, and report records. Save the dashboard after verification.

6. Example Dashboard – Student Management System

7. Advantages of Dashboards

- Provides important information in a single visual interface.
- Makes application data easier to understand through charts and summary cards.
- Reduces the need to open several reports individually.
- Provides quick access to common forms, reports, and application actions.
- Supports faster monitoring of current application status.

8. Result

The dashboard activity was successfully carried out in Zoho Creator. Key student information was organized using summary cards, reports, charts, and quick-access components. The dashboard provides a consolidated view of the Student Management System and supports faster monitoring of application data.

9. Conclusion

A dashboard is an effective way to present important application information in a single view. By combining summary cards, reports, charts, calendar views, and quick links, Zoho Creator dashboards make application data easier to monitor and understand. The Student Management System dashboard demonstrates how different components can be integrated into one useful interface.
